

# SPECIFICATION SHEET

Product Group: **Heating & Lighting**

**PRODUCT NAME: WALL & CEILING MOUNTED HEATER**

Product Code: **BLWALLCEILHEAT**

- The Brandline Wall or Ceiling Mounted Heater uses shortwave infrared to produce the required heat.
- Shortwave IR is an ideal solution for providing warmth and comfort to your customers outside in chilly conditions.
- They provide the heat required without being affected by breezes. This is because infrared is not a convection heating system like gas heaters.
- Infrared waves travel through the air to solid objects such as furniture and people. These waves are then absorbed, creating the feeling of heat.
- With recent increases in energy costs, shortwave infrared is a cost-effective heat source, with the bonus of being more controllable than traditional heating systems.
- To find out more information on suitable controllers for your heater, contact our sales team, who will be happy to discuss further.
- Thanks to the slim design, our Infrared Heaters can also be wall or ceiling mounted.
- Our Ceiling & Wall Mounted Heaters are IP55 rated and available from 1kW to 4.5kW.
- Depending on the model the heaters are available in a range of colours, these include black, white, and anthracite grey for the 1.5 version.
- Featuring a long 7,000-hour lamp life, and easy to maintain for reliable performance in various environments.
- Our 1.5, 2.0 & 4.5W models are available with gold lamps for added intensity.
- Ceiling and wall-mounted heaters are supplied with fixing clamps.
